hi Roger,

nice to hear from you. as you know, we moved to Chatham, and it's been quite busy so far . . .

that dose occurred without our diversion wall installed, so the storm event / flow velocity must have been somewhat substantial. we're going to need to 'calibrate' the flow, if you will, as we go along.

anyway, yes, i don't see any reason why we can't take down the silt socks. however, i would ask you in a rhetorical manner, will the Town be erecting a fence along the path? at the moment, the stakes and sock act as a sort of barrier to the public getting down in the BMP area. how does the Town feel about the public perhaps getting down into the BMP area?

i'm going to copy Nick Cristofori from CEI b/c if you decide you do indeed want it down, then we can call Paul and he can remove it all . . .

Hello Ray hope all is well! - the gravel wetland had a "good dose" of storm water this week ! - and it looks as though all is functioning very well . The vegetation is establishing nicely (grass & plants). I was wondering if we can now remove the silt sack and stakes along the brick path - but your call - Regards,Roger
